Analyzed

Findings

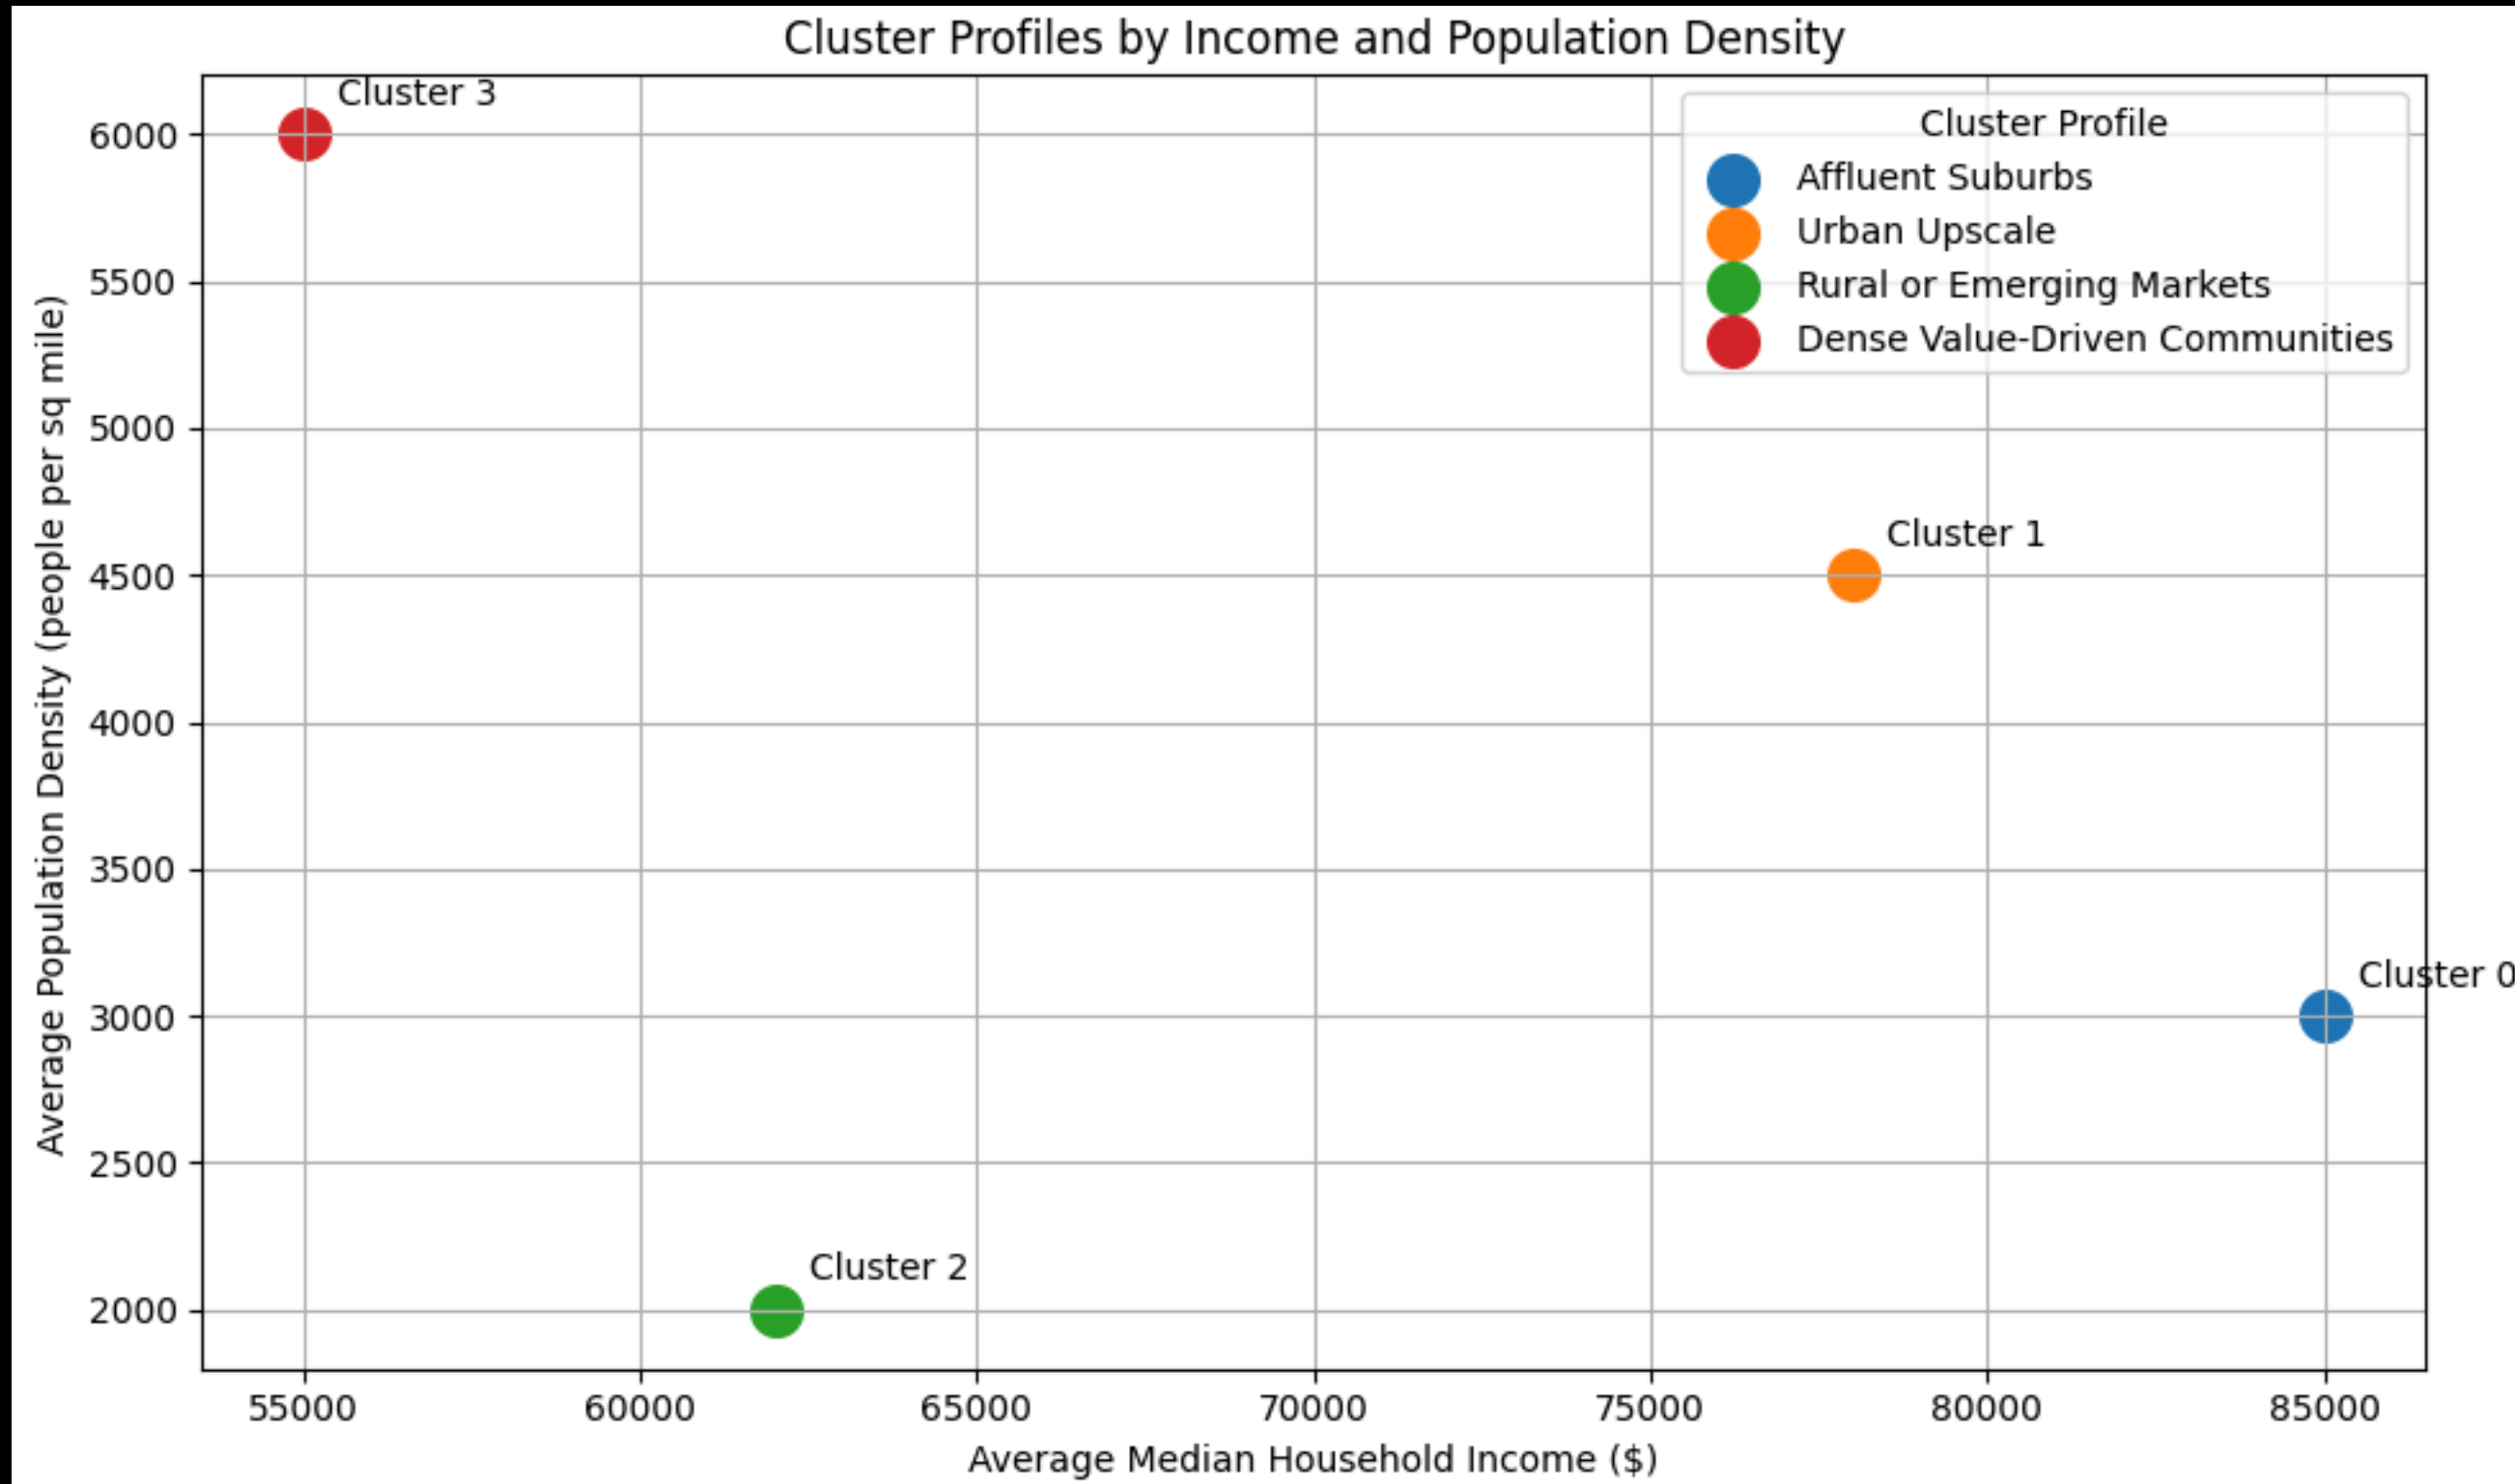

Clothing Stores in Beverly Hills and Glendale Show Highest Long-Term Survival Rates Among Top LA Cities

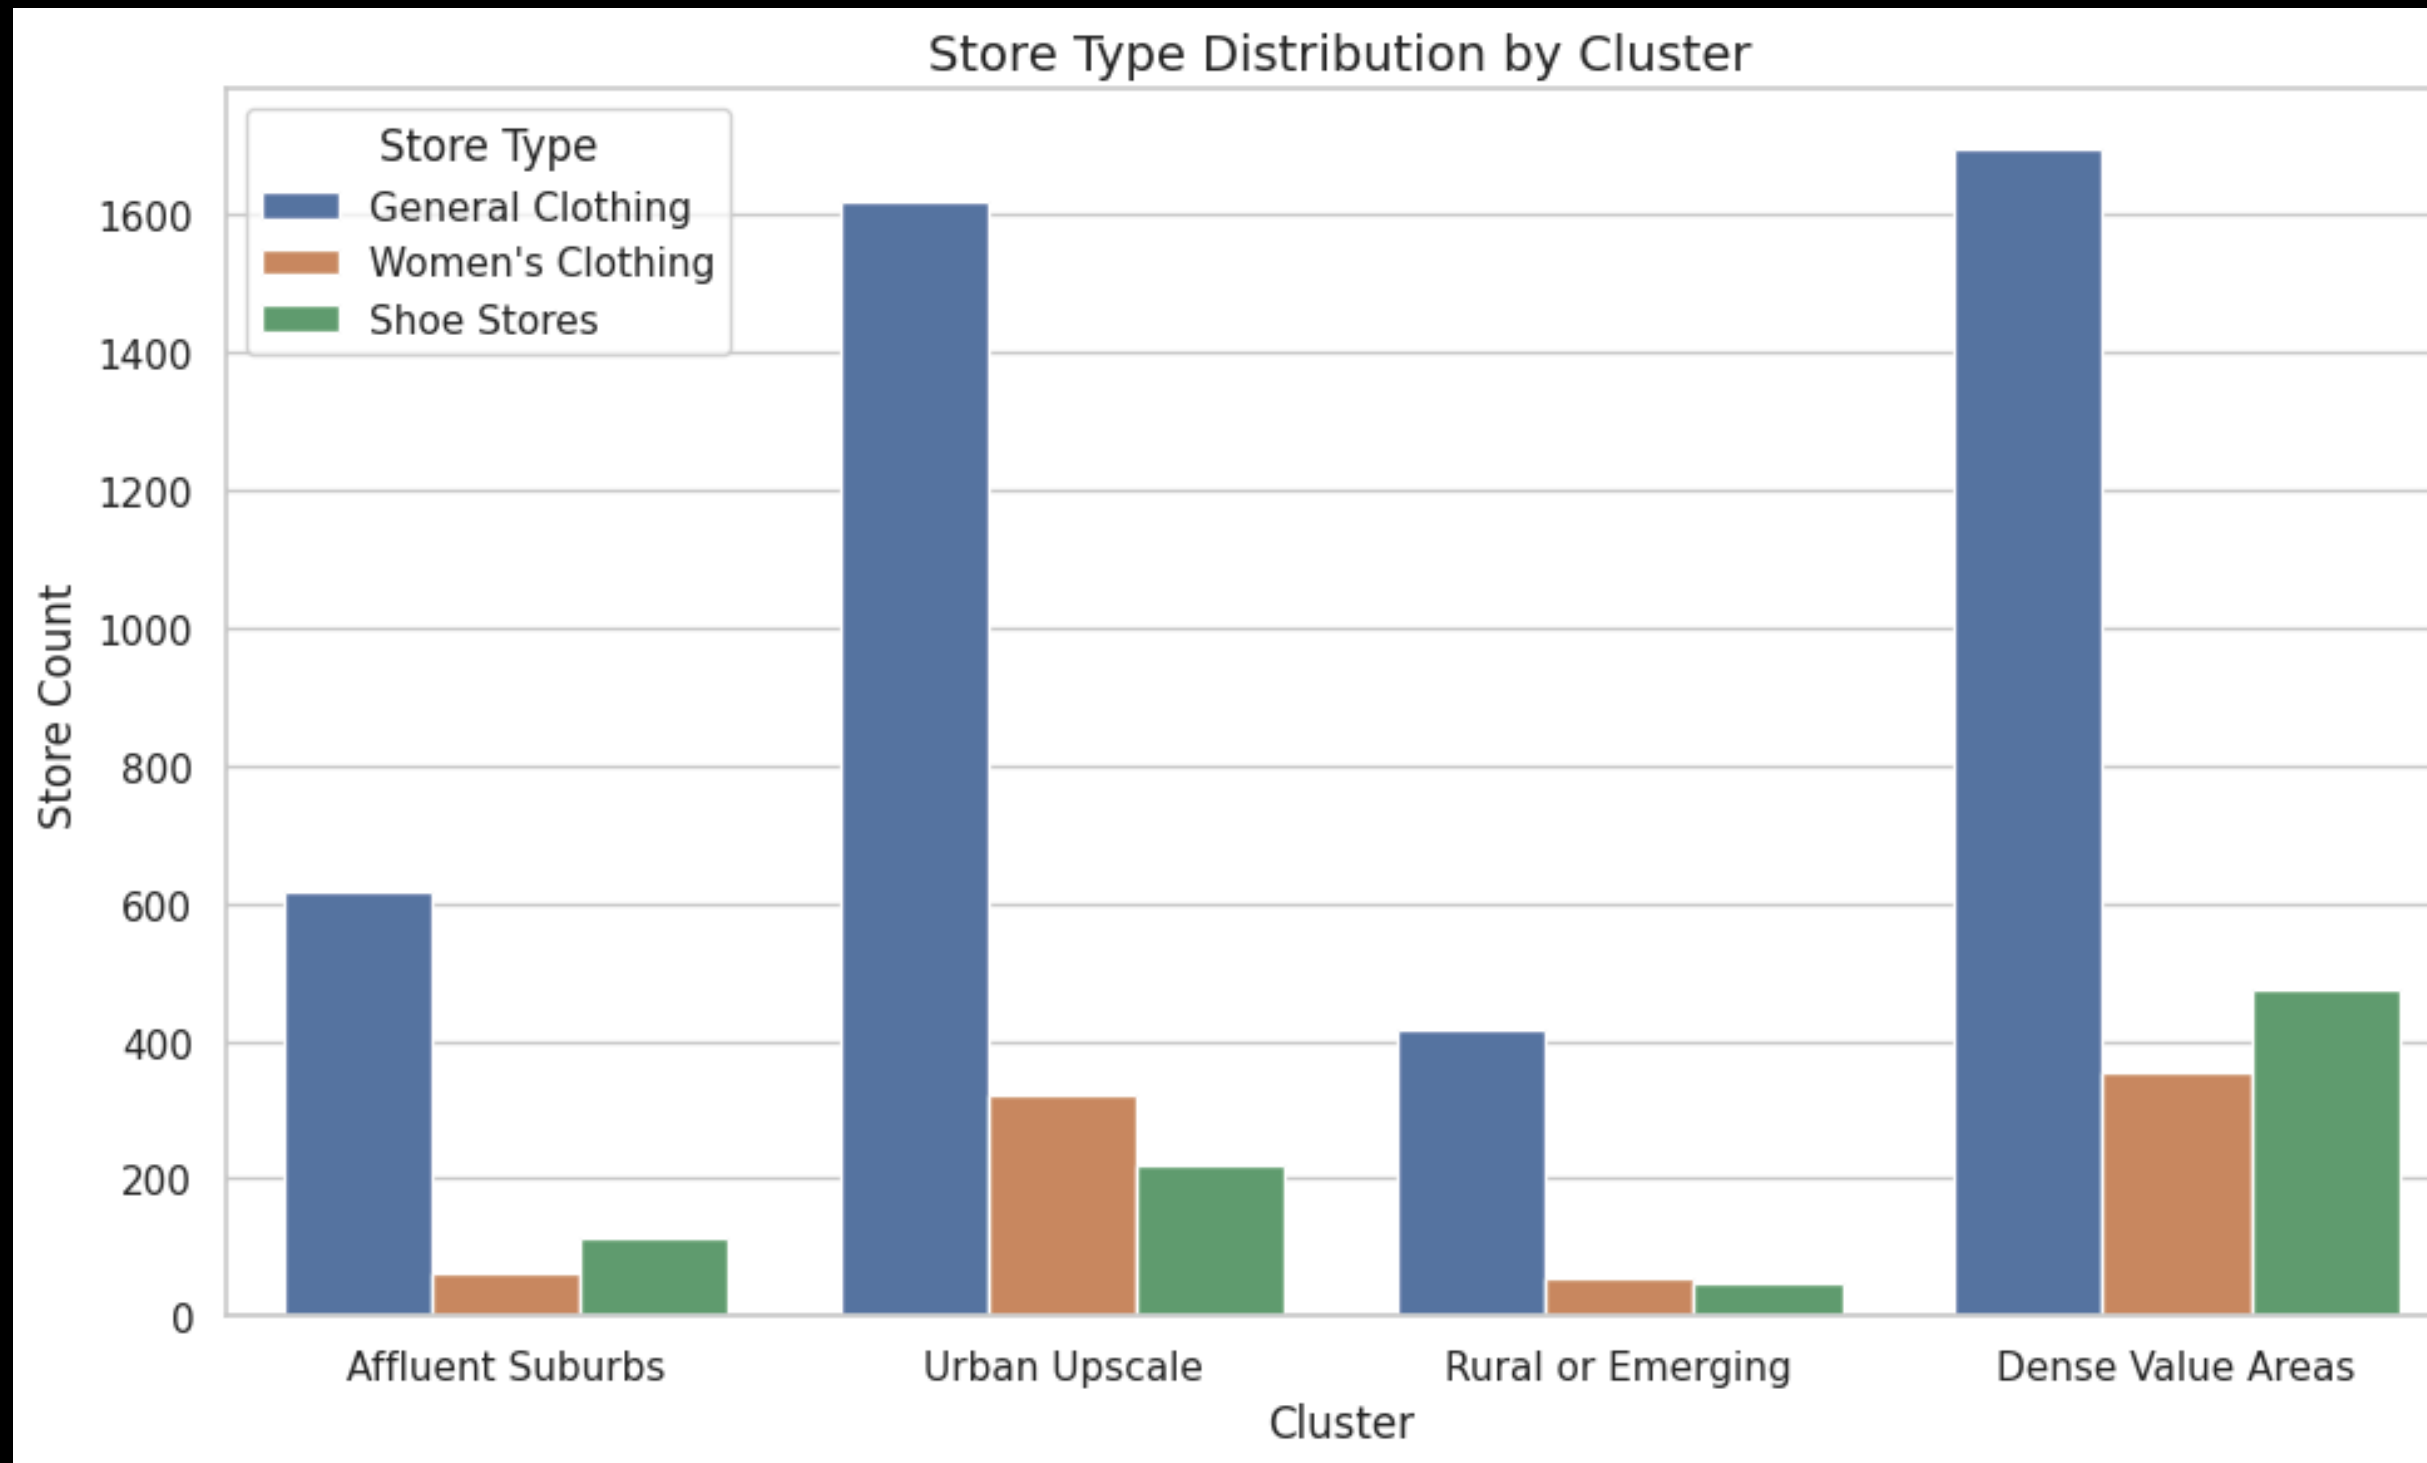

Over Half of Clothing Stores Close Within Their First 6 Years in Business

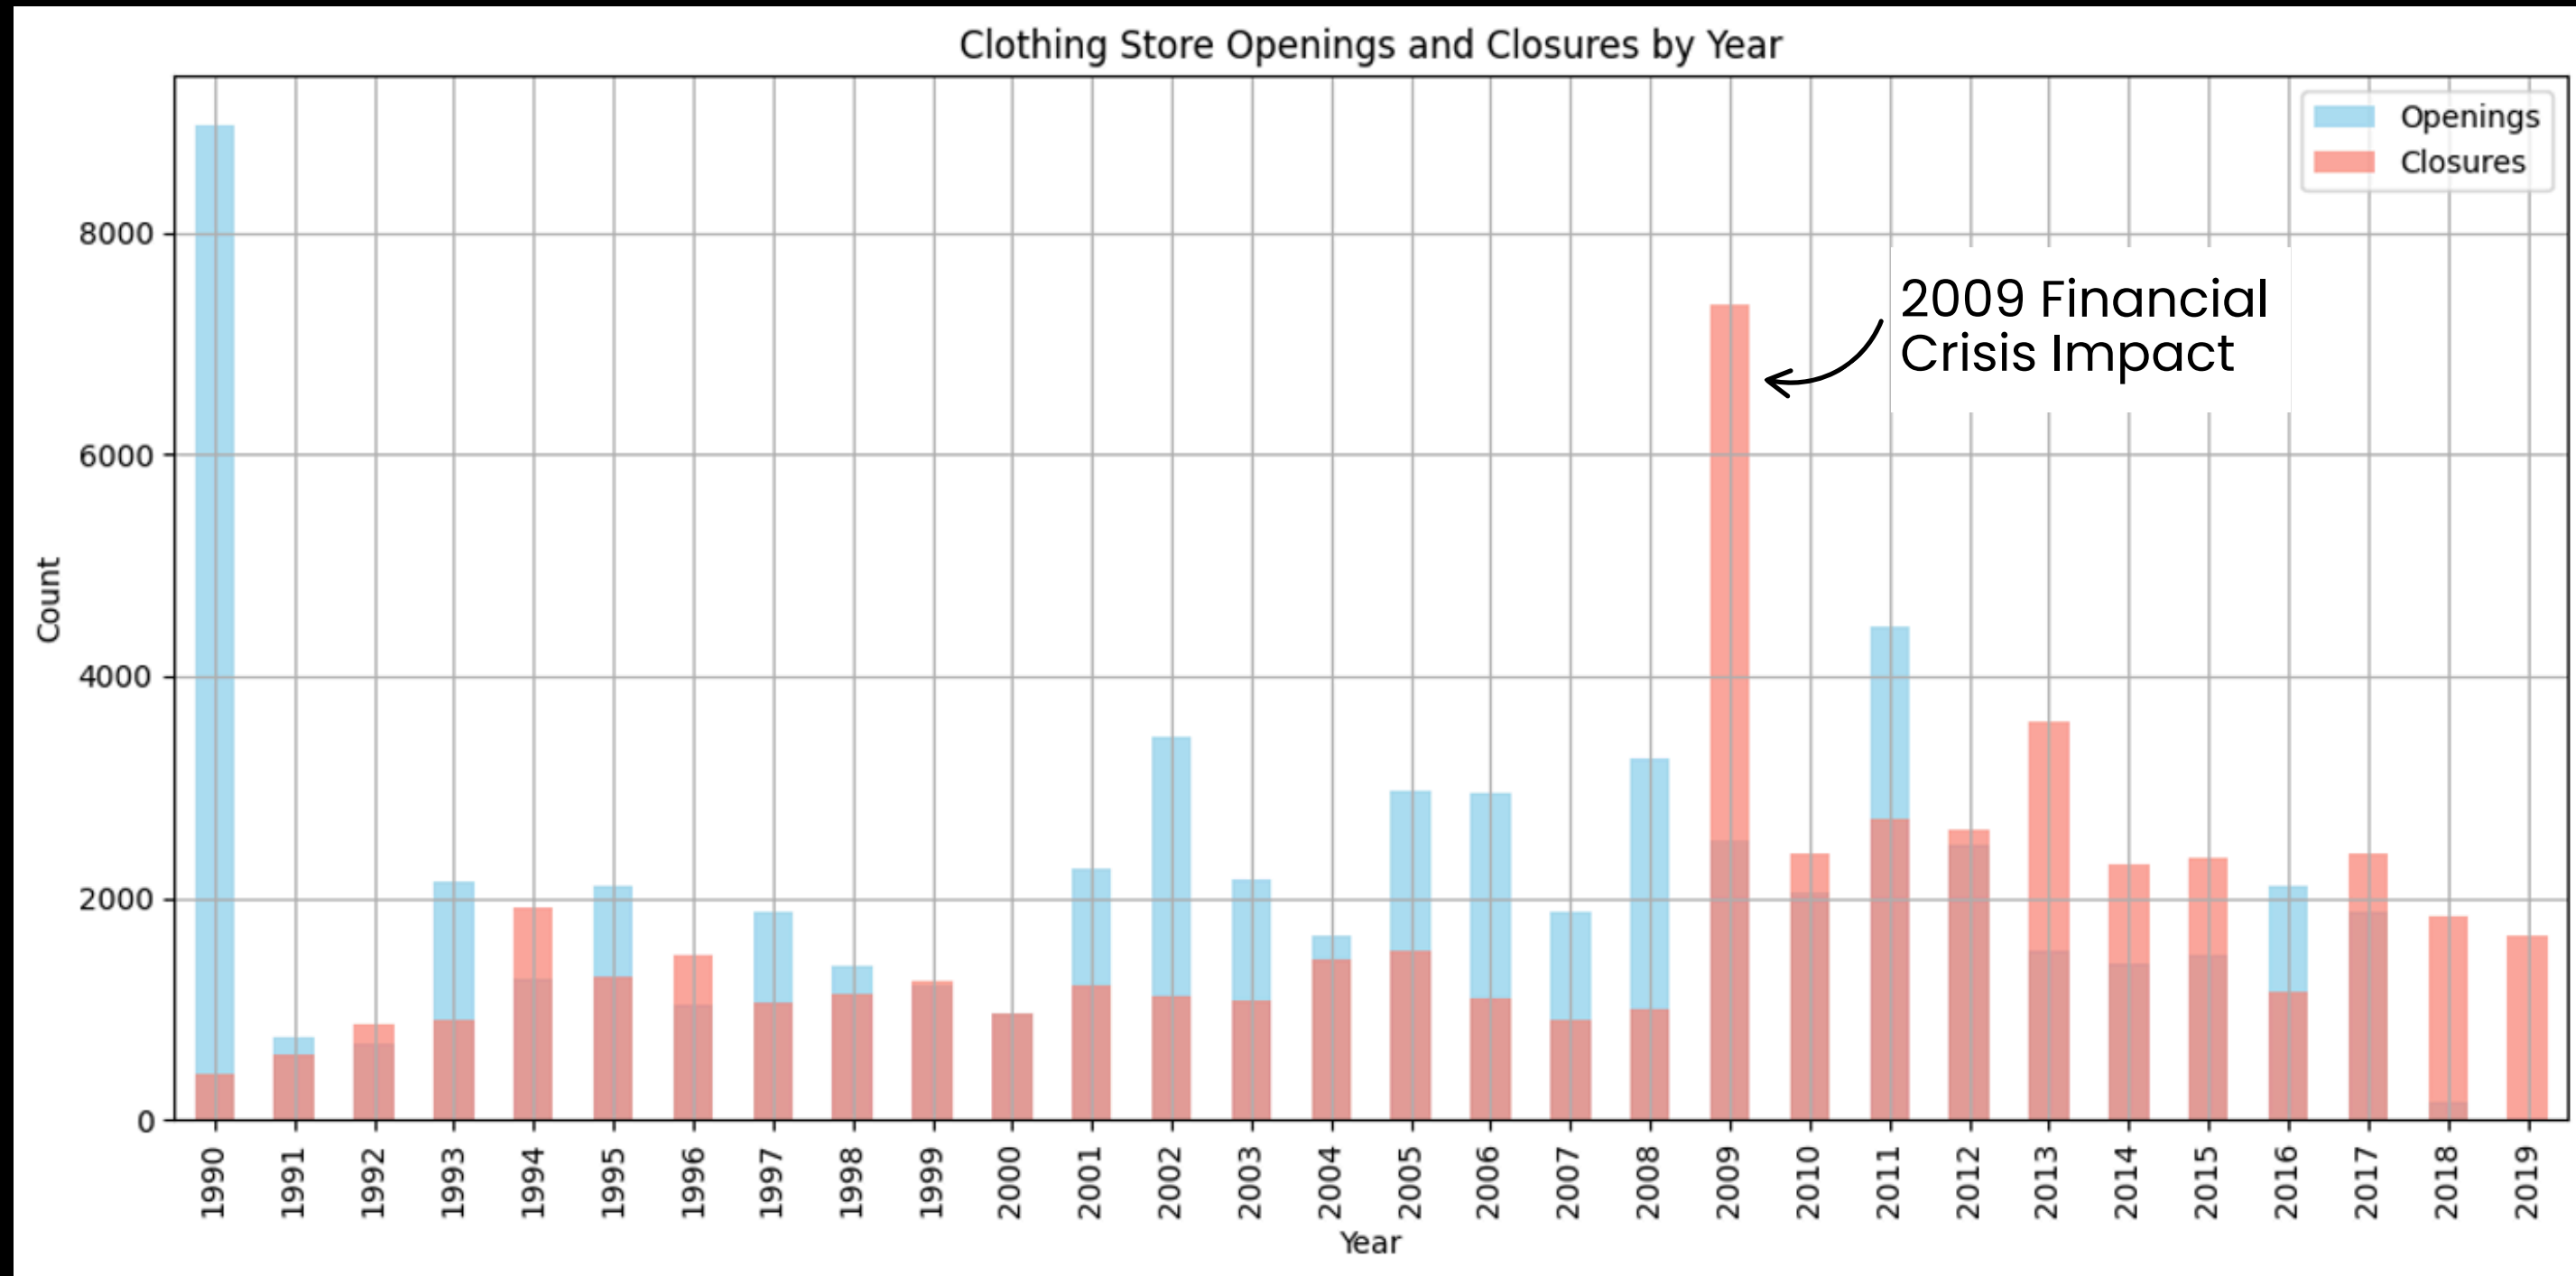

What Do Our Market Clusters Look Like?

Dense Value Areas Hosts the Most Diverse Mix of Store Types, While General Clothing Dominates Across All Clusters

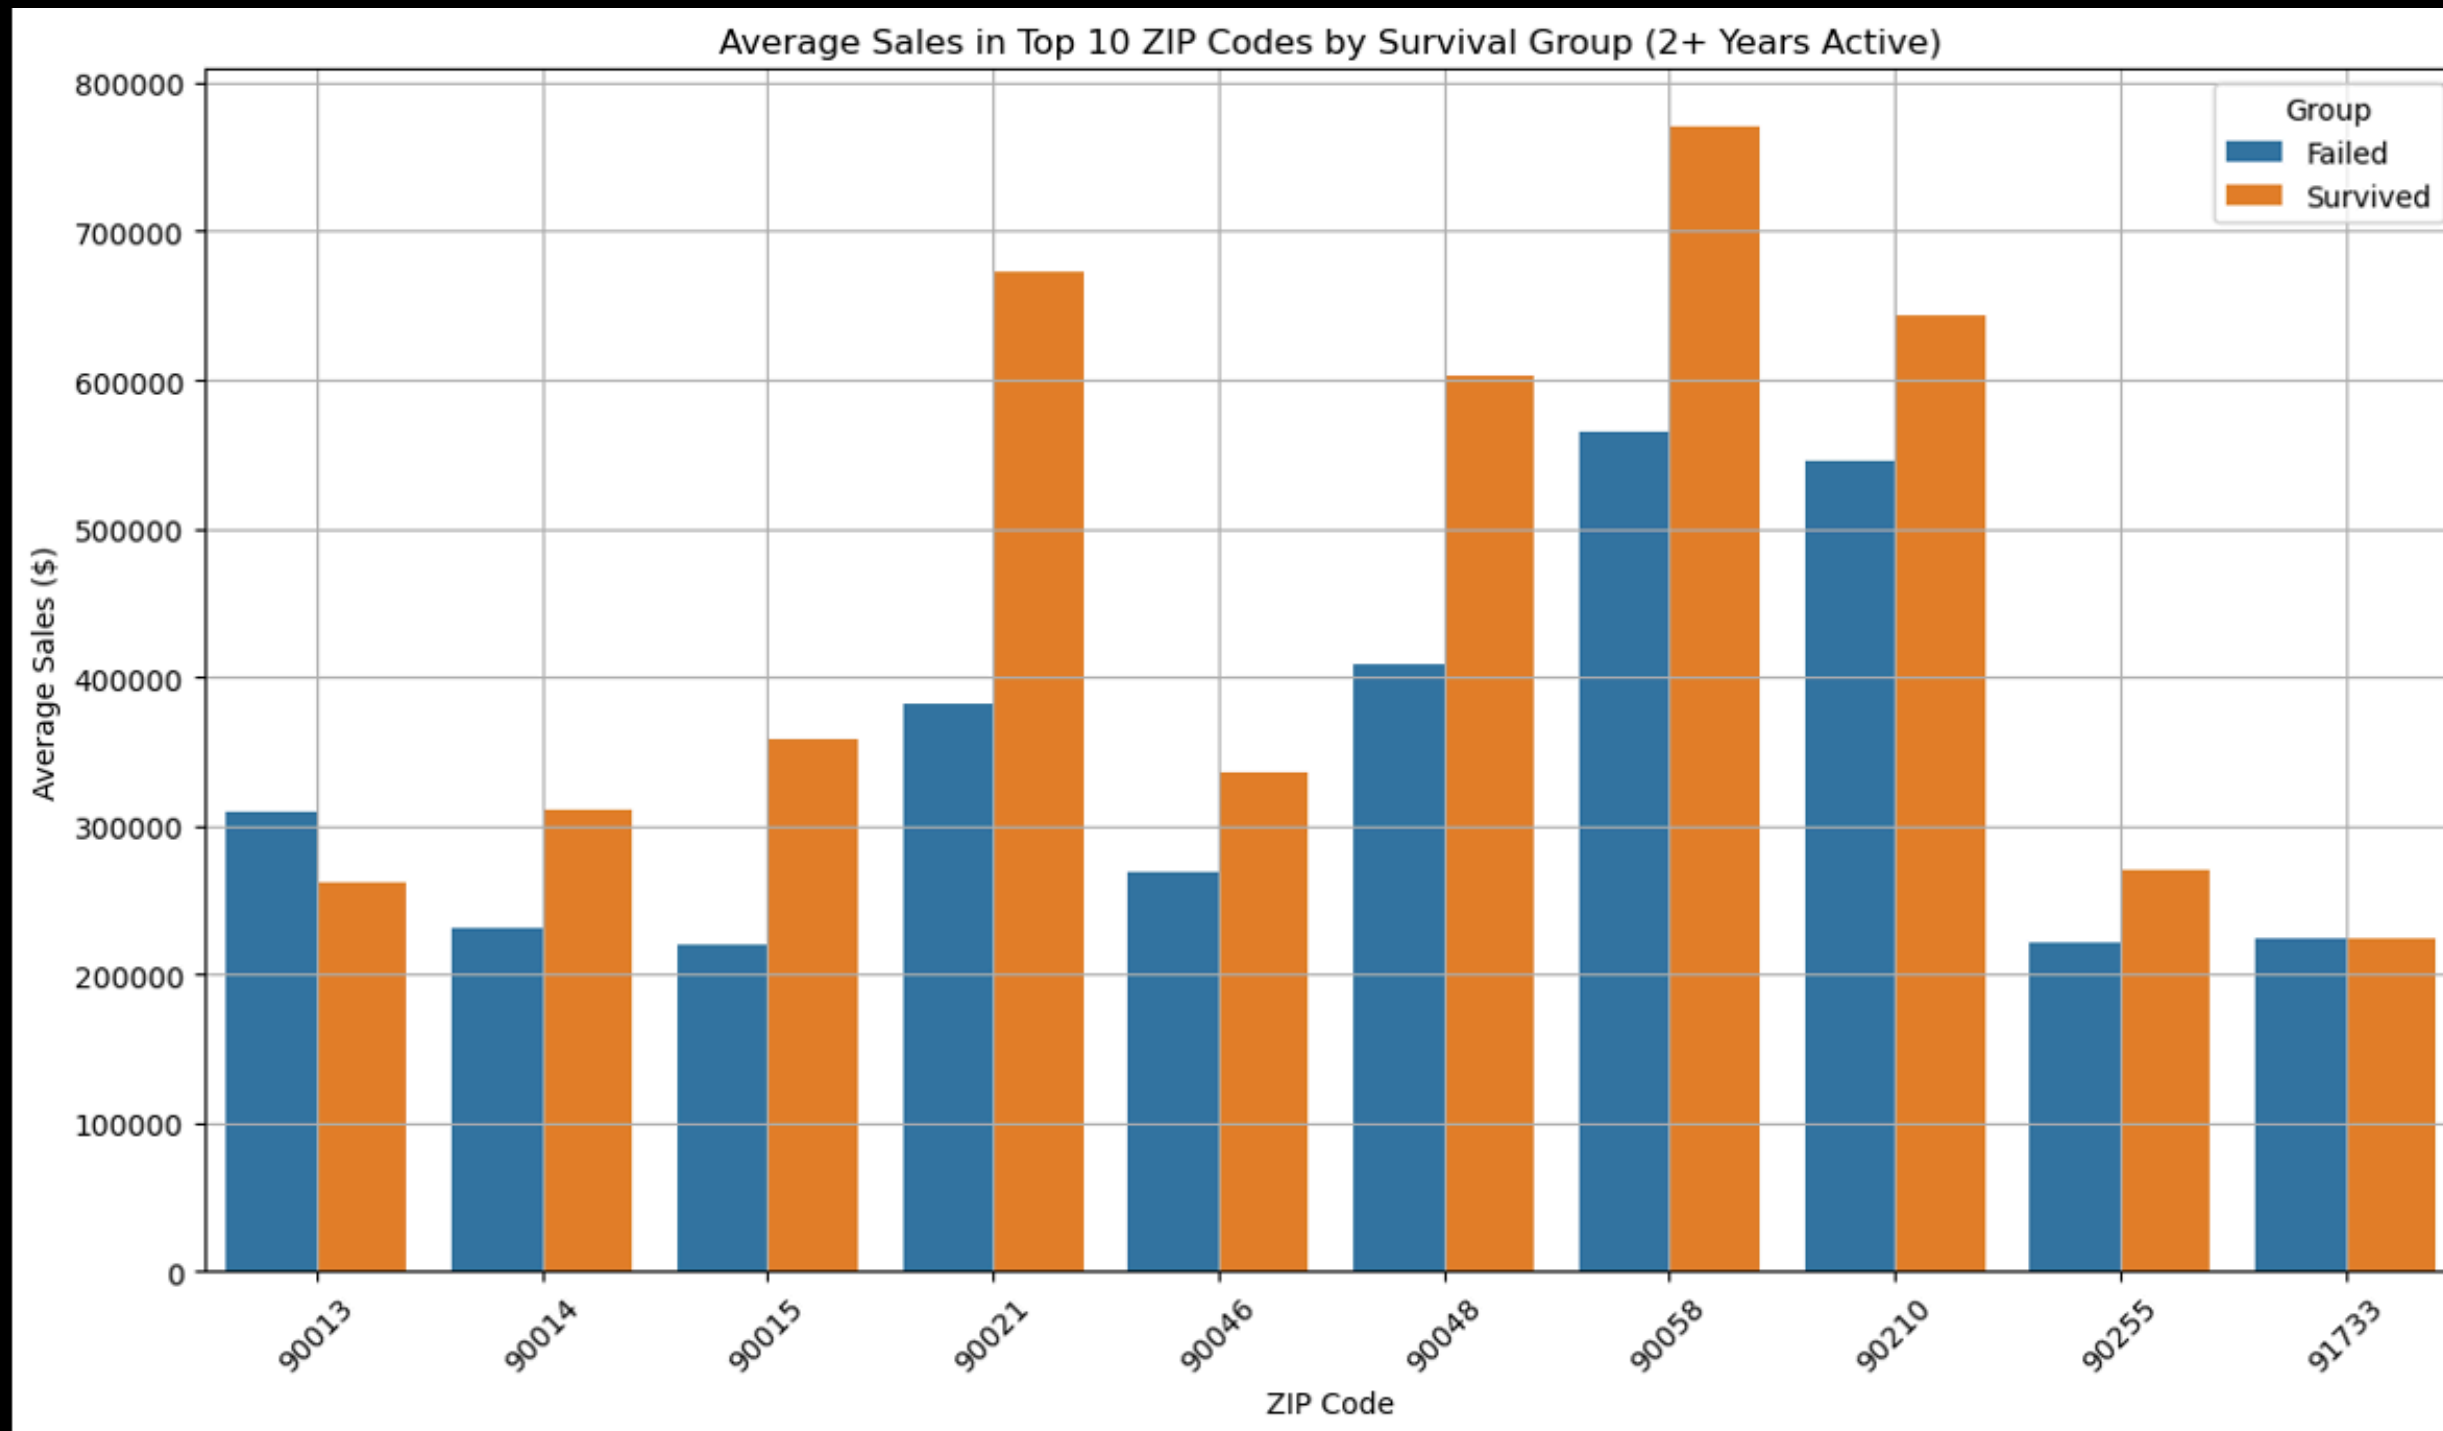

2009 Marks a Turning Point: Clothing Store Closures Surpass Openings and Remain Elevated Through the 2010s.

Women's and Other Clothing Stores Most Frequently Co-Locate Across LA County Zip Codes

Do Stronger Sales Predict Store Survival?

Recommendations

Where Should We Launch Next?

1

Claremont

- High survival rate, moderate saturation, strong community demographics

2

Agoura

- Excellent average store lifespan, high-income suburban base

3

Maywood

- Underserved cluster with surprising stability and solid foot traffic

4

Northridge / Canoga Park

- Family-focused zones with high general apparel demand

Where Should We Avoid (For Now)?

1

Downtown LA

- Extremely saturated, high foot traffic but high competition

3

90014/13

- Adjacent to Fashion District; high turnover despite dense activity

2

Beverly Hills

- Premium zone, but tough entry without strong brand positioning

4

Santa Monica

- Expensive leases; survival rate not proportional to cost

Choose the Right Store Type for the Market

Dense Value-Driven Communities

- Launch General and Women's Clothing
- Northridge, Canoga Park

Affluent Suburbs

- Target Premium or Boutique Apparel
- Agoura, Palos Verdes

Urban Upscale

- Mix of Foot-Traffic Retail + Online Hybrid
- Glendale, Santa Monica

Rural Markets

- Deprioritize for now
- Low demand, few stores, and weak demographic fit

Launch Stores Together — Where It Makes Sense

**Women's + Family
Clothing**

**Children's Clothing
+ General Apparel**

Dense Zip Codes

Thinking Ahead: Estimating ROI Potential

While this project focused on survival, saturation, and store type alignment, our model could be extended to estimate ROI using inputs like:

- Estimated lease cost per zip code
- Local foot traffic or store density (as a proxy)
- Historical churn rate or store lifespan

These factors could be combined into a location scoring model to guide investments.

Conclusion

**Where Store
Survive?**

**Where the market
is saturated?**

**What store types
fit each location?**

Thank You
